

## **PRESS RELEASE**

28.07.2022

### **ZETLY & NECT PARTNERSHIP**

We are pleased to announce that our company has entered into a partnership with Nect GmbH. By introducing Nect, Zetly will entrust the Hamburg startup with the task of detecting fraud attempts at an early stage and further facilitating and accelerating new user onboarding. Nect technology enables user-friendly online identification via a smartphone, no matter where or when, and above all without waiting times.

*“Preventing fraud, money laundering and other activities that may be illegal or harm the legal order is an absolute priority in our business. We decided to choose Nect GmbH to serve us with its experience and technological solutions in this area. At Zetly, we are very happy with the cooperation we have undertaken, because, just like with us at Nect, the basis of all activities is trust”- notes Michal Glijer, founder and CEO of Zetly.*

Thanks to the cooperation between Zetly and Nect, users of our All in One Platform will be able to verify their identity using the innovative Nect Wallet solution. User verification, in turn, greatly affects the transparency and security of transactions on our platform.

*“Nect offers a fully automated remote process at the on-site security level. Zetly is a modern and unique platform that combines sports and solutions based on blockchain technology in one place. We are glad that she joined the group of our clients in Poland” - adds Matthias Lukiewicz Country Manager Poland at Nect.*

*Nect solutions focus on security and data protection. This is ensured by the completely in-house development of proprietary software components, as well as the use of data centers in Germany with an extremely high level of security and the abandonment of cloud solutions.*

#### *Nect GMBH*

*Nect GmbH is an award-winning IT company based in Hamburg. The technology developed and patented by Nect was first used in 2018 at R + V Versicherung in the form of Nect-Ident, online identification via an AI-based application. Meanwhile, other well-known companies have joined the customer base, including Telekom Deutschland, Hamburgische Investitions- und Förderbank (IFB), and more than 80 percent of Germany's statutory health insurers. In addition to Nect-Ident, the company offers a Qualified Electronic Signature (QES), eID and Nect Wallet solution that functions as a digital means of identification and allows you to reuse your digital identity in seconds.*
